

## Locking Pole Mount Bracket Set

The locking pole mount bracket set was specifically designed to easily and safely secure the Radarsign battery powered driver feedback sign to multiple pole or post locations. There are two pieces to the bracket, a pole mount component and sign mount component.

The back pole mount bracket attaches permanently to each pole/post location. The heavy duty stainless steel bracket can be mounted to a pole or post using a pipe clamp (included with the sign purchase), a U-bolt or a carriage bolt.

The front bracket attaches permanently to the driver feedback sign. The driver feedback sign can then be moved to multiple pole locations that have a back pole mount bracket installed. A lock and 2 keys are included with the battery powered sign. The locks are unique for each sign and cannot be replaced if lost.

All screws and nuts are covered when the front pole mount bracket is secured to the back pole mount bracket and the driver feedback sign is attached.

Please note that multiple back brackets will need to be purchased depending on the number of pole locations you have. For example, if you have 2 driver feedback signs and 5 poles, you will need 5 back pole brackets and 2 front brackets. In this example you would need 3 additional back brackets.

## Pole Sizes to be used with Radarsign Locking Pole Mount Brackets

**Round Pole:** 2.5 inches - 8 inches diameter  
(Larger diameter requires banding)  
Hardware: pipe clamp or U-bolt

**Wooden Post:** 4x4 to 8x8  
Hardware: Carriage bolt

**Hat Channel or U-Channel Pole**  
Hardware: Carriage bolt

**Square Metal Post:** 2x2 inch with holes  
Hardware: Carriage bolt or pipe clamps

The back pole mount bracket attaches permanently to the pole. All screws and nuts are covered when the driver feedback sign is attached.

The front bracket attaches permanently to the driver feedback sign.

The driver feedback sign hooks onto the back pole mount bracket. The lock then secures the two pieces. (Lock is included with the sign).
